Atomoxetine reduces errors by rats in the 8 arm radial maze retention paradigm

7 hour delay

*p<0.002

FIGURE 1

Atomoxetine improves object recognition in the object recognition test with a 3 hour delay

Atomoxetine was administered 1 hr before rats were exposed to 2Identical objects in first trial. 3 hr later rats were exposed to a familiar and novel object.
N=9 rats *=P<0.05
